

ONLINE GAMING WEBSITE

Frontend Web Development PRD | Responsive Browser Game Portal

Stack	Category	Scope	Target Platform
HTML/CSS/JavaScript	Web Development	Frontend MVP	Modern Browsers

1. Project Overview

The developer is hired to build a responsive online gaming website for a casual browser-game portal. Visitors should be able to browse sample games, filter the catalog, open a game detail or demo play screen, and understand the platform from a polished landing page. The product should feel modern, arcade-inspired, fast, and simple to use.

Item	Requirement
Website title	NeonPlay Arcade or another original gaming portal name
Frontend stack	HTML, CSS, JavaScript; React is optional
Core experience	Browse games -> filter category -> open play screen -> return to catalog
Visual style	Dark arcade interface with bright buttons, cards, and hover states
Target devices	Desktop, tablet, and mobile browser screens

2. Core Website Requirements

Feature	Main Requirement
Homepage	Hero section with clear title, tagline, and primary call-to-action button.
Navigation	Header navigation for Home, Games, Categories, About, and Contact.
Featured Games	A highlighted section showing selected games or a featured game banner.
Game Catalog	At least six game cards with thumbnail, title, category, and play button.
Category Filters	Filter controls for Action, Puzzle, Arcade, Racing, and Casual.
Play Screen	A game detail or demo play area with visible instructions.
Contact Section	Simple contact form UI or contact information block.

3. Game Data Requirements

Field	Requirement
Game title	Each sample game must have a visible title.
Category	Each sample game must belong to one visible category.
Thumbnail	Each sample game must show an image, icon, or generated visual.
Play action	Each sample game must include a clear play button.
Description	The detail or play view must explain the selected game.

4. Visual Direction

Area	Main Requirement
Theme	Dark gaming interface with neon or arcade accents.
Cards	Rounded game cards with clear spacing and readable labels.
Buttons	High-contrast buttons with hover or active states.
Typography	Readable text across desktop and mobile screens.
Responsiveness	Cards must reflow cleanly on smaller screens.

5. Interactivity Requirements

Interaction	Expected Behavior
Navigation links	Links scroll to or open the correct section.
Browse button	Primary CTA moves users toward the catalog.
Category filter	Selected category updates catalog results.
Play button	Button opens a game detail or play screen.
Return button	Play screen provides a way back to the catalog.
Contact form	Form fields are visible and usable as frontend UI.

6. Responsive Layout Requirements

Viewport	Requirement
Desktop	Game catalog should show multiple cards per row.
Tablet	Game cards should reduce columns without overlap.
Mobile	Navigation and cards must remain usable below 480px width.
Images	Thumbnails must scale without distortion.
Text	No important text should be clipped on small screens.

7. Deliverables

#	Item	Format / Notes
1	Source Project	Complete editable website source files.
2	Homepage	index.html or equivalent entry file.
3	Styles	CSS file or framework styling source.
4	Scripts	JavaScript file or React source code.
5	README	Setup, run steps, features, and controls.
6	Assets	Images, icons, fonts, or generated visuals used by the site.
7	Credits	Source and license notes for every third-party asset.

8. Not in Scope

- Real-money gaming
- Payment processing
- User authentication
- Online multiplayer
- Persistent leaderboard backend
- Admin dashboard
- Mobile app export
- Commercial game character recreation

9. Quality Checklist

- Website opens locally without build errors.
- Navigation links are functional.
- Catalog shows at least six games.
- Category filtering changes visible results.
- Play screen opens from a play button.
- Mobile layout is usable below 480px.
- README includes setup instructions.
- No copyrighted game characters are included.
